The Project

Barcelona, the vibrant city on the Mediterranean, invites students from all around the world to spend an unforgettable time there. With its renowned universities, its wealth of cultural heritage and its lively atmosphere, Barcelona is the ultimate destination for students.

The Pallars student residence is an oasis of tranquility and comfort in the heart of the lively hustle and bustle of this city. With a made-to-measure FS 4.2 RHOMBOS expanded metal ceiling system in the double-height main lobby, the corridors and the reception area, durlum creates an inviting environment in which students can feel at home. These expanded metal panels without inserts imbue the area with a real sense of openness. Combined with a natural style of interior decoration, this ensemble creates a warm and welcoming atmosphere.

Built in an industrial area, the building's façade combines the industrial character of the area with the modernity of the student residence. This is also an environment that students will find conducive to learning.
